

ARE ALL OF YOUR FERTILIZER EGGS IN ONE BASKET?

Fall & spring soil applying 100% of your crop fertility needs does not guarantee a bumper crop. Mother Nature needs to cooperate ALL SEASON LONG!!!

FOLIAR FEEDING MITIGATES SOME CROP INPUT RISK

Reducing soil applied nutrients lowers “up front costs” during seeding

If Mother Nature cooperates, foliar nutrients can be added to herbicides and fungicides throughout the growing season when the plants need the nutrients

SYNERGY SRN FAMILY OF FOLIAR FERTILIZERS

Allow you to choose WHICH NUTRIENTS and WHEN to feed your growing crop

Tank mix with herbicides to improve weed kill while foliar feeding your crop

**Tank mixing with fungicides allows you to spray sooner and protect your crop longer
The fungicide slow releases with the SRN up to 28 days**

Foliar applied vs soil applied nutrient equivalent

<u>Nutrient</u>	<u>Foliar</u>	<u>Equivalent</u>	<u>Soil</u>
N	1		4-12
P	1		20
K	1		6
S	1		6
Fe	1		100
Mn	1		30
B	1		30

DOMAIN 204-736-2893
